PLM365 FUNCTIONAL CAPABILITIES

PLM and Application Modeler Studio

Your Administrators best friend in monitoring and configuring your PLM environment, add attributes, business rules or other custom interactions to your schema through this easy to use UI based Data Modeling Environment.

Data Federation

Import data from any external system without having to customize our application to understand your data schema. PLM365 dynamically reads your data formats and instantly creates the baseline you desire.

Document Management

Managing document revisions and history has never been easier. Edit or view documents dynamically from a single interface, and manage functionality, including storage, revision control, traceability and associativity with other PLM object types.

Item, Part Management and Classification

Eliminate redundancy and enhance reuse across the enterprise. PLM365 will easily import, analyze and adapt data from any external system, no customization, no programming required.

Bill of Materials Management

Speed innovation and time to market with a BoM structure of your product templates, assemblies and parts. Allows you to quickly copy BoM's to create derivatives of new products, while maintaining traceability of objects and data.

Process & Workflow Management

Seamless integration to meet the business workflow requirements. Provides all business process modeling capabilities for task management and tracking, along with predefined workflow templates that are easily customizable.

Engineering Change Orders (ECO) and Requests (ECR)

Visualize traceability and audit trail evolution of all objects, with PLM365 predefined ECO, ECR process templates that can be customized with ease to meet your change management process.

Security and System Administration

Provides role based granular security access control to all PLM365 objects, attributes and attribute values based on permissions granted by role, organization, location of current access.

Analytics and Reporting

Drive higher productivity and efficiencies with easy creation of new reports and analytics that help identify potential bottle necks. Our default Dashboard templates give users the flexibility with easy access to their data, enhancing productivity and decision making.

Enterprise Search

Machine Learning enabled Search with synonym dictionary, phonetic, case sensitivity, 2D and 3D shape search features providing a wide range of rich and full search capabilities.

ON PREMISE
Deployable on the private cloud

CLOUD
Available as SaaS on the cloud

USER FRIENDLY
Easy to Adapt

CONFIGURABLE
Modeler and widgets based configuration and customization

INTELLIGENT
Self-Learning platform

ADAPTIVE
Adapts to your processes and data
